

WORKS NOTICE | JULY 2024

Richmond workforce accommodation and facilities

Early works will begin on Richmond workforce accommodation and facilities from July 2024.

Why?

Richmond workforce accommodation and facilities (WAF) is the second of six hubs proposed to be built along the CopperString 2032 project corridor. Richmond WAF will typically accommodate up to 250 people, who will predominantly be transmission line workers. Early works are required to ensure WAF construction can start from September 2024.

Timing

Early works are expected to start from late July 2024 and will occur between 6.30am and 6.30pm, Monday to Sunday. Some activities may need to be undertaken outside of these hours to comply with safety requirements and other permits. Construction of the Richmond WAF is expected to be completed by early 2025, weather permitting.

Works overview

First, a temporary facility will be built for the 30-50 people who will construct the full-sized Richmond WAF. Early works will include ecological and environmental surveys, minor vegetation clearing, fencing, earthworks, construction of site access roads, installation of services, including sewerage, water and power, and the delivery of ready-made modular buildings.

Works impacts

These activities will involve the use of heavy equipment such as excavators, trucks, and cranes, as well as oversized deliveries. The UGL CPB Contractors Joint Venture team will work to minimise impacts, including using traffic control measures and water trucks to control dust. However, some disruptions should be expected. We thank residents and motorists for their patience and understanding during this time.

More information

For all construction, procurement and employment enquiries please call the UGL CPB Contractors Joint Venture team on **1800 161 200** or email info@uglcpbcus.com.au. For more information about the project, please scan the QR code or visit www.powerlink.com.au/copperstring2032.
